

C3 CyberSecurity

Keep your business safe from modern day security threats.

Our Multi-Layer Security Solution offers you the highest level of protection yet!

CYBER PROTECTION: THERE HAS NEVER BEEN A GREATER NEED FOR IT

Businesses are more vulnerable than ever to cyber threats. Australia has had the highest increase in cyber attacks than any other country. Ransomware attacks in particular have increased dramatically. Cybercriminals are now directing attacks at businesses, as they can make more money from us. As a result of this, attacks of this nature have risen six-fold in the last year alone.

IT'S TIME TO STOP LETTING THE CYBERCRIMINALS WIN!

We have created a Multi-Layer Security Solution that is your best defence against these modern-day threats.

HOW **CYBERCRIME** EFFECTS YOUR BUSINESS

-  **Down time:** Once a virus is in your system, downtime could be anywhere from hours, to days, depending on the backup & business continuity systems you have in place.
-  **Added Costs:** In some cases it costs a business more to recover from being infected with a virus, than it would to implement preventative security measures. Software may not be cheap, but clean up & downtime could be a lot worse.
-  **Data Loss:** Your data is your businesses' livelihood. Cybercriminals have the ability to encrypt and destroy your critical business data.

BENEFITS OF HAVING **C3**CyberSecurity

-  **Tried & Tested:** Our Technical Engineers have trialed and tested all of our security solutions to ensure they do what they are meant to - protect your business.
-  **Full Stack Protection:** We have put together a suite of solutions that work effortlessly and effectively together, giving you superior protection across your entire business environment.
-  **Peace-of-mind:** You'll rest easy knowing that you're taking the best precautions you can to protect your business from modern-day cyber threats.

1 **C3**EndpointSecurity

Here is where we protect your Endpoint Devices, including your desktops, notebooks & tablets. Modern-day threats are often directed at the end users. As a business' primary source of work, it is so important to have the best protection possible on those Endpoint Devices.

2 **C3**ServerSecurity

Servers are what power your business and house your critical applications & data. We need to ensure that they are adequately protected, as any issues with a server is likely to effect your entire business.

3 **C3**EmailSecurity

We are seeing modern threats originating via email more often than ever. This includes most of the infamous Ransomware attacks that have been occurring in recent times. It's important to have the best email security protection out there, to ensure you're protected from these imminent threats.

4 **C3**WebSecurity

Our WebSecurity offers you cloud delivered network security for any device, any where. Many modern threats remotely execute viruses which involve translations of Domains into IP addresses. These addresses should always be checked to allow for safe browsing by you and your people.

5 **C3**GatewaySecurity

New viruses are being created all the time. Virtually all of these security threats originate from the Internet. It is therefore crucial that your internet traffic passes through a modern advanced Firewall, which can help protect your business against the abundance of modern security threats.
