C3 ManagedWireless

For a faster, more reliable connection.

c3group

DELIVERING SECURE, WIRELESS CONNECTIONS

RELIABLE **FAST** **GUEST-FRIENDLY** **SECURE**

Key Benefits & Features:

Fast & Reliable Connections:
C3 Group provides industry leading Wi-Fi performance, with products that deliver twice as much bandwidth as a standard access point.

Scalability & Policies Enforcement:
Our wireless solutions offer incremental capacity additions, meaning usage is scalable to your business size and needs. Policies can also be applied with greater efficiency, directly where users connect at the network edge.

High Resiliency:
Each access point operates as a stand-alone device with no central controller, and hence no single point of failure.

Easy to Integrate:
We ensure our wireless solutions seamlessly integrate with existing network infrastructure to deliver reliable & high performing connections.

Simplified Guest Access:
A great advantage of C3 Managed Wireless is the EasyPass feature. In today's professional world of office guests, and BYOD (bring your own device), users that may not regularly access your network, need to. This feature combines security and simplicity in allowing guest users to gain quick access to your Wi-Fi and internet, through a secure entry, while restricting access to the corporate network.

Optimised User Experience:
C3 Managed Wireless devices automatically configure optimal channel and power levels to deliver superior performance to your devices.

As technology continues to develop and progress, so too does business requirements. Today's business depends on wireless access points for collaboration, business applications, and most importantly, communication - both internally and externally. Staff are increasingly dependant on wireless internet for their everyday tasks. More than ever is the need for reliable and secure wireless connections that allow businesses to operate and communicate at optimal levels.

C3 Managed Wireless solutions were created to support and scale with Small to Medium Businesses (SMBs). With our wireless access points, business employees and guests can access network resources from places that were previously out of range, and at a level that is just as secure as a wired network.

> C3 Managed Wireless is an important piece of the networking foundation of your business.

A key feature of C3 Managed Wireless is EasyPass. This allows those who aren't regular users of your network, to safely and efficiently gain access to your wireless access points. As part of EasyPass, you get full visibility to track user activity and protect business data. We can combine Wi-Fi access with Microsoft Office 365 and Google Apps authentication, so that user credentials can be used to connect to the Wi-Fi network and network resources. EasyPass supports any type of device and operating system, including mobile phones, tablets, and laptops operating with iOS, Android, Windows and Apple OS X. EasyPass allows businesses to keep their data protected, and gives them the opportunity to attain user details, prompt social engagement and drive traffic to desired websites.
